

# Installation Lever and Cylinder

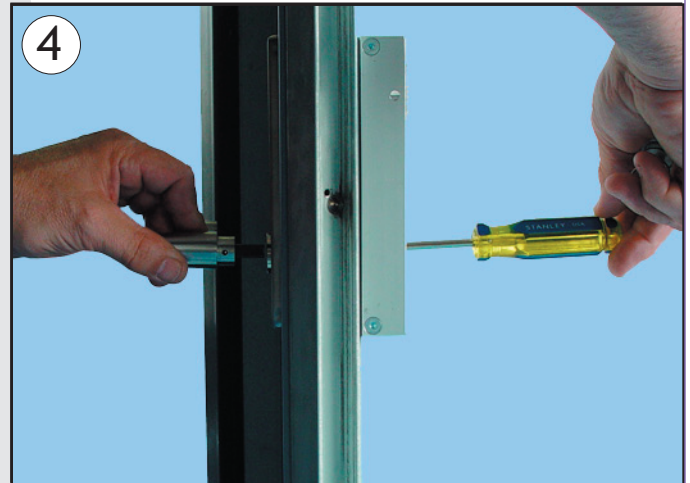

Remove the upper and lower allen screws on the hinge-side of the panic with a **Y33 allen wrench**.

Continued from **STEP 1**.

Use caution when sliding the panic bar to expose the lock mechanism. **The panic button will pop out.**

Insert lever handle as shown.

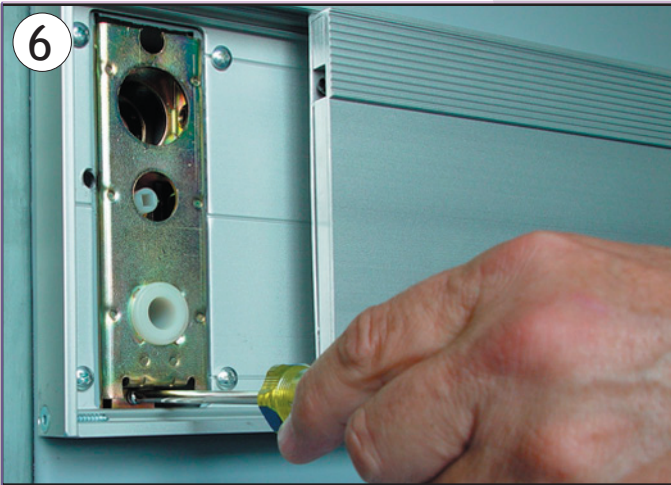

Secure the handle by tightening the phillip screw located inside the lock body.

# Installation Lever and Cylinder

To install the cylinder, loosen the bottom phillips screw **3 TURNS**.

Loosen the set screws to install your cylinder.

Loosen the top phillips screw **6 TURNS**.

Screw in the cylinder which should have a standard **B Cam**.

The lock should loosen enough to access the cylinder set screws as shown in **STEPS 8 & 9**.
