REGARDING: Rigidized Hinge

As of June 1st we are no longer using adhesive for rigidizing hinges. Total Door has developed a new mechanical method for securing the hinge. The new H90* insert is installed between the H13 hinge and the B14 hinge stile to restrain the hinge from rotating into the secondary position. The insert is handed for LH and RH doors and can be used on existing installations.

Note:

The rigid hinge application is intended for hold open applications only. This is not to be used as replacement for a door stop+.

***H90 – Parts List Price: \$30/pc**
